

MONKEY GRIP

HOW TO USE:

Monkey Grip can be spread over the surface of the wet coating layer taking care to spread it evenly over the surface. When the layer is dry it should be over coated with a clear layer of sealer to lock in the additive and insure long wearing characteristics. Alternately, the Monkey Grip may be premixed with the sealer and stirred in thoroughly to a uniform consistency. This mixture may be sprayed, rolled or brushed over the surface. Always stir the mixture occasionally during application. When the treated layer is dry, over coat it with a clear sealer coat. This locks in the additive and gives long wearing characteristics. Use one 2.5lb container to 5 gallons of sealer.

PRECAUTIONARY STATEMENT:

This product is not a hazardous substance or mixture
